

Optomap Retinal Exam

Ultra-widefield retinal retinal imaging

These images allow the doctor an in depth view of nearly the entire retina, allowing early signs of ocular conditions and systemic diseases such as:

- Age related Macular Degeneration
- Glaucoma
- High blood pressure
- Diabetes
- Retinal holes or detachments

Optomap Consent Form

I understand the benefits of the annual Optomap Retinal Exam as follows:

- The Optomap provides an annual, permanent record for your medical file.
- The ability for our doctors to view last year's image and this year's image side by side for comparison is an invaluable tool in providing comprehensive eye care.
- Allows the doctor an in depth view of nearly the entire retina.
- Educational tool for your doctor to discuss your health and wellness.

Name _____ **Date** _____

____ **Yes, I have elected to have the Optomap Retinal Exam today. I understand it is a \$50 fee that is not typically covered by insurance. (\$50 fee due at time of service) ***

____ **No, I have elected not to have the Optomap Retinal Exam today. I understand that a widefield of view of the retina is an important part of the comprehensive eye exam and that I am declining to obtain a comprehensive view of my retina against the recommendation of my doctor.**

NEW HEALTH SCREENING:

In addition to optomap retinal imaging, our office will also assess your nutritional health.

There are three key nutrients required to have good function in the back of the eye (retina). There is an easy, noninvasive way to scan your finger, and it reads those three nutrients with a high accuracy rate compared to the retina. The number or score it will give, tells your doctor why you might be having certain symptoms with your vision. This new technology is utilized here at Gresham Vision Center to help monitor your eye health, in combination with our Optomap photos.
